Study the following line graph and answer the following questions.

Number of units sold by two different shops (Shop A and Shop B)

Q1. If shop C sold 30% more units of Computer as compare to shop B and it sold 25% less units of PD as compare to shop A. Find the difference between the units of Computer sold by Shop C and the total units of PD sold by Shop C?

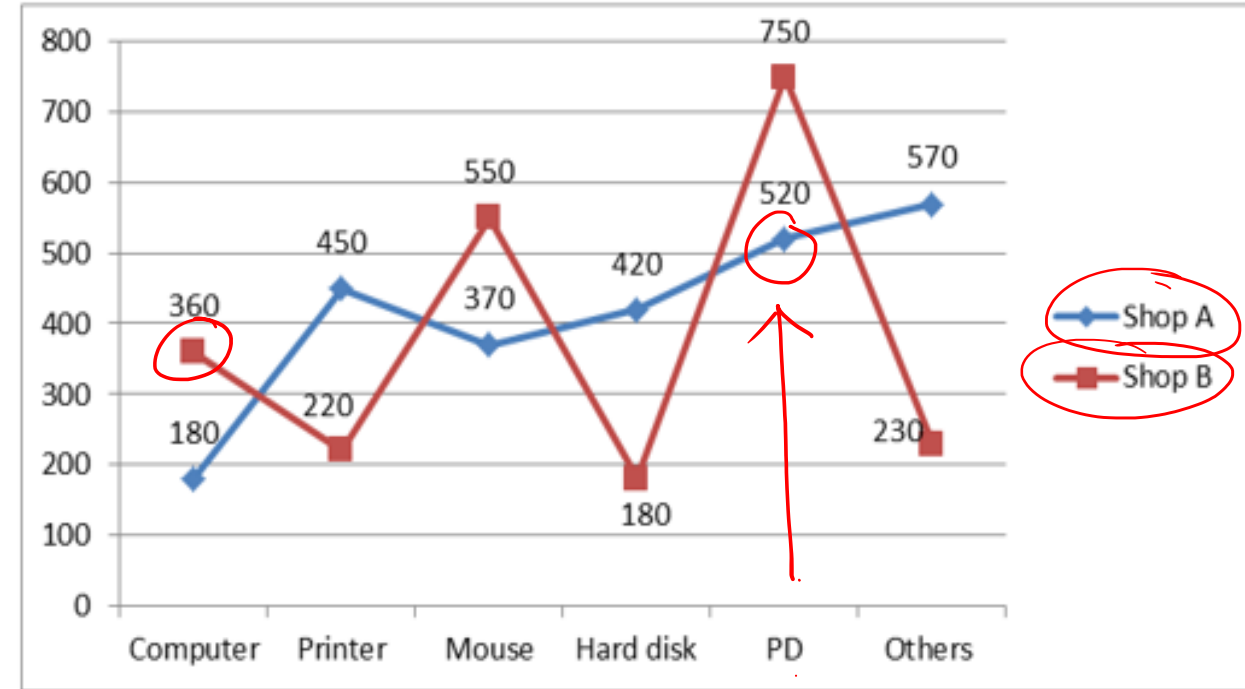

- A. 78
- B. 79
- C. 80
- D. 77
- E. 76

Data regarding the number of Doctors(D) and Engineers(E) in three colleges - A, B and C is given.

College A: Ratio of male doctors and male engineers is 12 : 5 and the difference between them is 280. Total number of female doctors and female engineers is 300. Number of male engineers is 30 more than that of the number of female engineers.

College B: Sum of the number of male doctors and male engineers is equal to the sum of the number of female doctors and female engineers in college A. Ratio of the male doctors and male engineers together and female doctors and female engineers together is 6 : 7. Ratio of female doctors and female engineers is 2 : 3. Number of male doctors in college B is 1/3rd of the number of male engineers in college C.

College C: Male engineers is 1.5 times the number of female doctors. Sum of the number of female doctors and female engineers is 550. Number of female engineers is 70 more than the number of female doctors. Total number of male doctors and male engineers is 760. ✓

Information regarding five different shops A, B, C, D, and E is given below. Each shop sells blue and red pens. Some data is missing which you have to calculate according to the question.

Allegation & Mixture

Shop	Number of Pens sold (Blue + Red)	Total Selling Price of pens
A	55	--
B	62	1080
C	--	--
D	51	--
E	--	1450

Avg Price =  $\frac{1080}{62} = \frac{540}{31}$

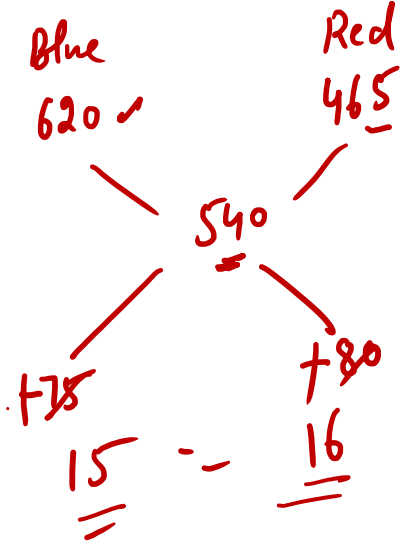

Selling Price of Blue pen = Rs. 20 and Red Pen = Rs. 15 respectively.

Q.13) Find the ratio of the number of blue pens to number of red pens sold by shop B.

- [a] 16:15
- [b] 11:15
- [c] 15:16
- [d] 12:13
- [e] 13:12

Blue Pen =  $x$   
Red =  $62 - x$   
 $(20 \times x) + (62 - x) \times 15 = 1080$

Information regarding five different shops A, B, C, D, and E is given below. Each shop sells blue and red pens. Some data is missing which you have to calculate according to the question.

Shop	Number of Pens sold (Blue + Red)	Total Selling Price of pens

B	62	1080
C	--	--
D	51	--
E	--	1450

Selling Price of Blue pen = Rs. 20 and Red Pen = Rs. 15 respectively.

Q.14) Ratio between number of blue pens sold by shop A and number of red pens sold by shop A is 3:2. If total selling price obtained by shop C is Rs 50 less than that obtained by shop A and number of blue pens sold by shop C is 5 more than red pens sold then, number of red pens sold by shop C is?

- [a] 24
- [b] 28

Handwritten calculation for Shop A:

$$\begin{array}{l} 55 \\ \text{Blue} \quad \text{Red} \\ 3 \quad : \quad 2 \\ 33 \quad \quad 22 \\ \times 20 \quad \quad \times 15 \\ \hline 660 \quad \quad 330 \\ \hline 990 \end{array}$$

Handwritten solution for Q.14:

Let number of red pens sold by shop C be  $x$ .  
 Then number of blue pens sold by shop C is  $x + 5$ .  
 Total selling price of shop C =  $20(x + 5) + 15x = 940$  (since it is Rs 50 less than shop A's total price of 990).  
 $20x + 100 + 15x = 940$   
 $35x = 840$   
 $x = \frac{840}{35} = 24$

Information regarding five different shops A, B, C, D, and E is given below. Each shop sells blue and red pens. Some data is missing which you have to calculate according to the question.

Shop	Number of Pens sold (Blue + Red)	Total Selling Price of pens

$$\frac{890}{51}$$

Q.15) If the ratio of total selling price of shop B and shop D is in the ratio 108:89 respectively. Then find the difference between the number of blue and red pens sold by shop D.

- [a] 6
- [b] 11
- [c] 9

Read the following information carefully and answer the questions based on it.

In a locality there are four buildings namely A, B, C, and D. Each building has a certain number of floors. Each floor has a certain number of flats and each flat has a certain number of people living in it. The information about each building is given below.

**Building A:** The number of floors in building A is same as number of floors in building C. The number of flats per floor in building A is equal to the product of the smallest and the second smallest prime numbers. The total number of people living in building A is  $\sqrt{1764}$ .

**Building B:** The number of floors in building B is one less than the sum of flats per floor in building A and C. The number of flats per floor in building B is the same as the number of floors in building A. The total number of people in building B is  $6\frac{2}{3}$  time the number of people in building A.

**Building C:** The number of floors in building is  $\sqrt[4]{2401}$ . The number of flats per floor in building C is one less than the number of flats per floor in building A. The number of people per flat in building C is four times more than the number of people per flat in building A. The total number of people in the building is 175.

**Building D:** The number of floors in building D is 9. The number of people per flat in building D is 60% of the number of people per flat in building C. The total number of people in building D is 108.

**Note** - The total number of people living in a particular building = No. of floors in the building  $\times$  No. of flats on each floor  $\times$  No. of people per flat.
